Research Methods in Terminology Online Workshop

(Organizers: Hungarian Association of Applied Linguists and Language Teachers, Terminology Section + AILA Europe)

This online workshop invites researchers, doctoral students and practitioners to explore and discuss methodological approaches to terminology research across disciplines. As an inherently interdisciplinary field, terminology research draws on linguistics, translation studies, corpus linguistics, knowledge representation, and the digital humanities. This workshop aims to provide a forum for reflecting on established and emerging research methods, their theoretical grounding and their practical applications.

We particularly welcome contributions that critically engage with research design, data collection, analysis, and interpretation in terminology-related studies.

Topics of interest include:

- Qualitative and quantitative methods in terminology research
- Corpus-based and corpus-driven approaches to terminology
- Terminology extraction, annotation and evaluation methods
- Methodological issues in multilingual and contrastive terminology research
- Methods in terminography and terminology management
- Use of digital tools, AI, and NLP in terminology research

Abstracts of approximately 200 words should be submitted via Google Form by 15 March 2026.

Participation is free of charge, but registration is required. The registration deadline is 31 March 2026.

For registration, please scan the QR:

Important dates:

Abstract submission deadline: 15 March 2026

Notification of acceptance: 31 March 2026

Workshop date: 8 May 2026 (ZOOM) between 10 AM - 5 PM (CET)

The workshop will consist of 20-minute presentations, followed by structured discussion sessions. We welcome contributions from both established scholars and early-career researchers, and we particularly encourage submissions that reflect on methodological innovation, limitations, and best practices in terminology research.
